

## HA1(H3N2)(A/Kansas/13/2009)

|               |                                                                                                           |
|---------------|-----------------------------------------------------------------------------------------------------------|
| Cat No.:      | 01-02-0457                                                                                                |
| Product Name: | HA1(H3N2)(A/Kansas/13/2009)                                                                               |
| Description:  | HA1(H3N2)(A/Kansas/13/2009)                                                                               |
| Type:         | Recombinant Protein                                                                                       |
| Property:     | C-terminal 6xHis tagged                                                                                   |
|               | HA1(A/Kansas/13/2009(H3N2))(a.a.17-345)(Gene Bank<br>Accession No.ADD21560) ( human isolate of SOIV H3N2) |
| Source:       | HEK293                                                                                                    |
| Genbank No.:  | ADD21560                                                                                                  |
| Applications: | WB standard, antibody ELISA, immunogen, etc                                                               |
| Formulation:  | Each vial contains 100 ug purified protein(1mg/ml) in<br>PBS(pH7.4).                                      |
| Purity:       | >95%                                                                                                      |
| Storage:      | Store at -80°C, Avoid freeze / thaw cycle.                                                                |
| Limitation:   | For research use only, not for use in diagnostic procedures.                                              |
